Product Information

SNAKE BITE MODULE - Pressure Immobilisation Bandage Kit

There are a number of Pressure Immobilisation Bandages (PIB) available on the market. Not all can do the job effectively.

Did you know that approximately 50-60mmHg pressure is required to be applied evenly around a limb to occlude lymphatic flow. All first aiders should be taught the Pressure Immobilisation Technique but we doubt that most understand how the venom from various animals travel through our bodies.

FRA has sourced what we believe to be the only specialised PIB that can do the job well.

Our Snake Bite Kit includes:

- 2 x Survival Snake Bite Bandages (Pressure Immobilisation)
- 1 x Heavy Crepe Bandage (Applying splint)
- 1 x Pair, Universal Shears
- 1 x Thermal Blanket (Environmental protection)
- 2 x Triangular Bandages (Immobilisation Technique)
- 1 x Marker pen (Bite location)
- 1 x Instructions leaflet

Available in Soft Kit or Cryopak Module

The Pressure Immobilisation Technique should be applied for suspected envenomation by the following animals:

- * All known poisonous snakes
- * Blue Ringed Octopus
- * Cone Shell
- * Funnel Web or large black spider
